

ATA

40th Annual Technical Conference 2019

Digitalisation: Opportunities for Tax Administrations

LELI LISTIANAWATI

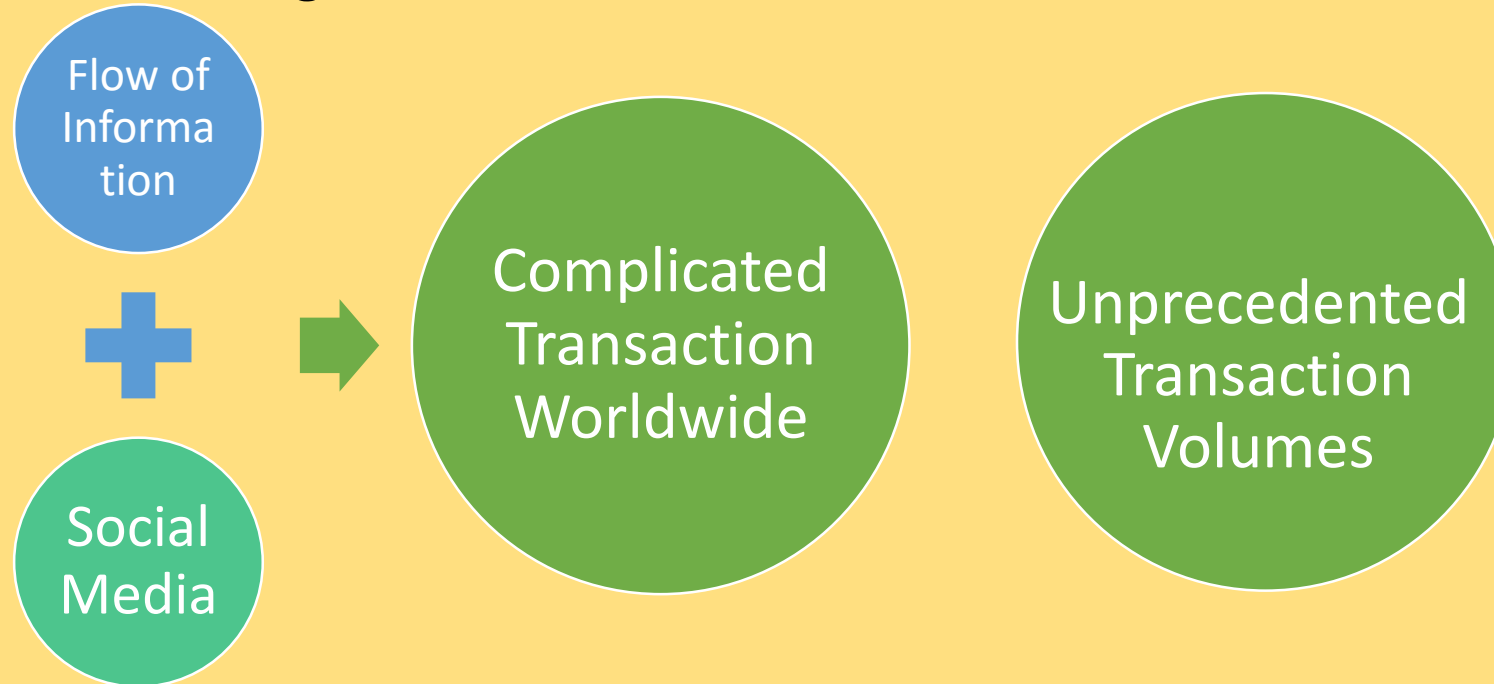

Date of Presentation: 11-11-19

- Trends of Digital Transformation
- Digital Transformation in Tax Authority
- Challenges and Strategies
- ICT Products in DGT
- Future Development

Trends of Digital Transformation

Disruptive Technologies

Globalization and Digitization of Business

Trends of Digital Transformation

2 Pillars of Digital Transformation

Tax Payer's Engagement

- Simplicity
- Transparency
- Data Management

Staff Empowerment

- Modernizing
- Data Sharing
- Automation

Trends of Digital Transformation Solution

ICT evolution as the driver of ICT-induced transformations

Digital Economy

Disruptive environment surrounding revenue bodies

The taxpayers of the future

MILLENNIALS/ GENERATION Y
1980s to 1990s

Digital Tax

Digital Transformation in Tax Authority

Digital Tax

Digital transformation can help tax administrations with the following primary areas:

- Transparency;
- Taxpayer-centric solutions;
- Connected tax stakeholders;
- Data-driven decisions and automated processes

PWC, Digital Transformation Tax Administration, 2017

- Making Tax Authority smarter so managing tax is easier, faster and more certain for our customer;
- Significant reductions in compliance time and effort for businesses;
- Contributes to Government's better public service target.

IRD New Zealand, 2017

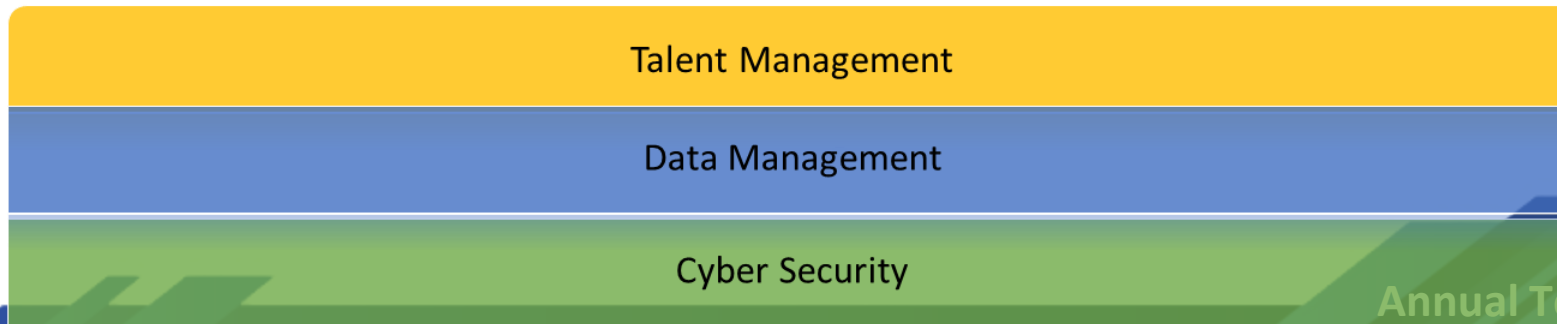

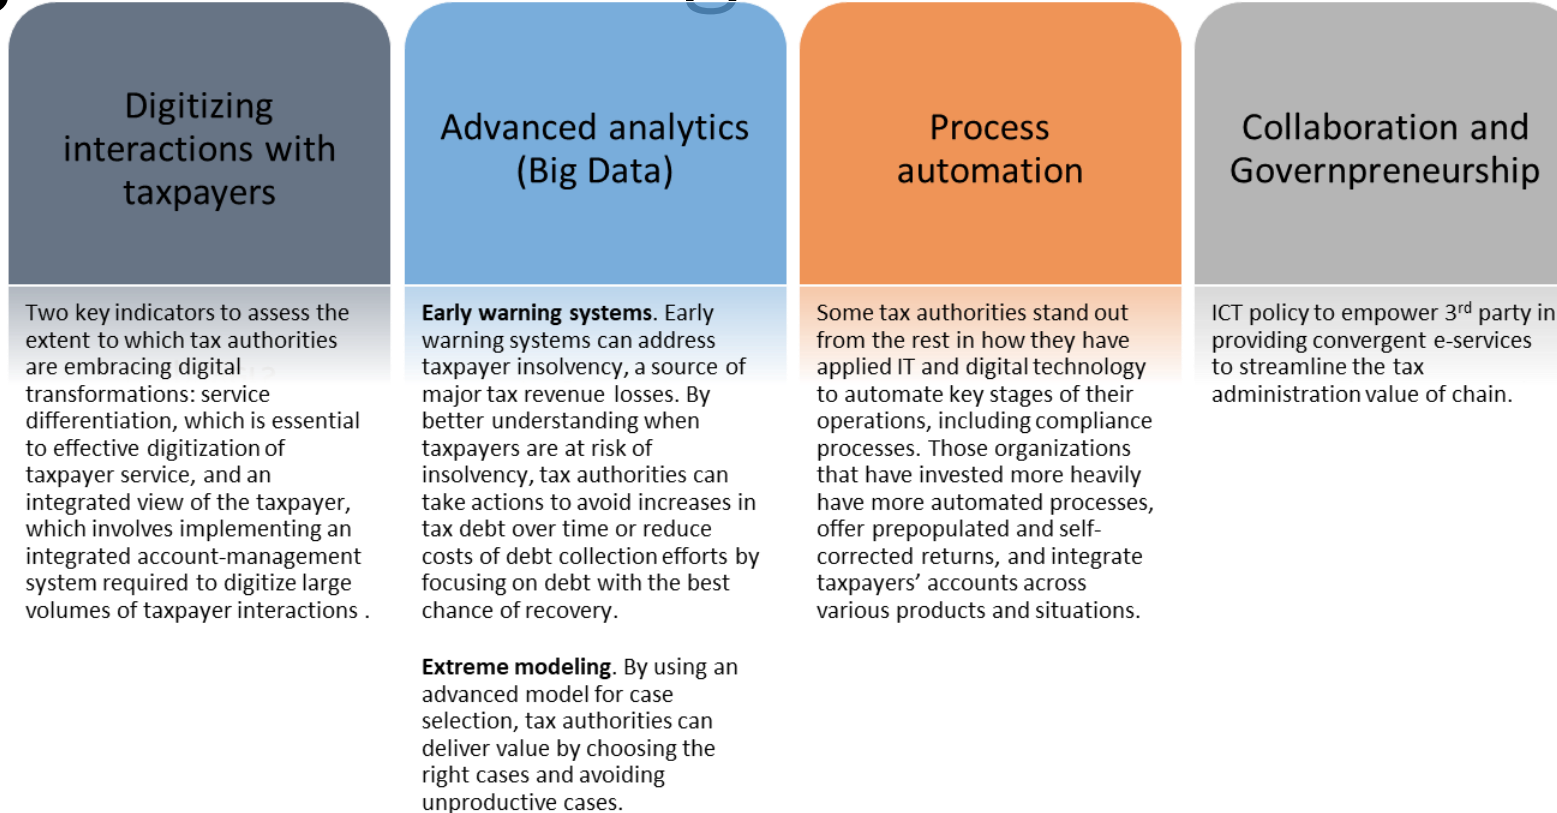

Challenges and Strategies

Challenges in Digital Transformation

- Rigid tax regulations that do not align with latest trend of digital economy;
- Operational procedures that do not focus on the taxpayer and do not follow best-practices;
- Outdated technology and infrastructure which slow down flexibility and responsiveness, which leads to technical complexity to move on to a new platform;
- Reluctant-to-change mindset and low digital literacy in DGT employees;
- Low connectivity within organization that limit mutual learning and collaboration;
- Being unable to allocate resources effectively because of internal

Challenges and Strategies

Strategies

ICT Products in DGT

Our Current Products

- E-Registration;
- VAT Invoicing: Client Application, Web, Host to host Application;
- Withholding Tax;
- E-Filing;
- E-Billing;
- Big Data Analytics (Self Service BI);
- Call Center.

Future Development

Our Next Products

- VAT to accommodate CRS transactions in e-commerce and other dynamic digital economic environment;
- Withholding system to be integrated with external payroll systems;
- Electronic Stamping;
- E-Filing: Prepopulated Tax Return;
- Self service BI;
- Business intelligence (descriptive, predictive and prescriptive analysis);
- Open-data government;
- Single digital identification.

THANK YOU
